Monologue

Dr. Peter Glidden fills in for Dr. Wallach starting the show discussing the failed medical system. Asserting that cholesterol lowering drugs are not slowing rates of heart disease in the U.S. These statin drugs are the biggest selling drugs world wide and netting pharmaceutical companies 25\$ billion in the U.S. alone.

П

Pearls of Wisdom

Doug Winfrey and Dr. Glidden discuss a news article concerning a CDC study on cholesterol levels lowering in the last two decades. Using government data researchers determined that overall blood cholesterol levels of dropped over the past twenty years. Attributing the drop to lifestyle changes of avoiding trans fats and taking lipid reducing drugs. Doug and Dr. Glidden ask if this is such a good thing why hasn't the rates of heart disease also dropped.
